All transactions start as journal entries, and then are posted to the general ledger. If you make a mistake while posting the entry, whether by entering the wrong transaction amount or getting debits and credits mixed up, the effect will trickle down through the process and unbalance your trial balance.

Utility, value and transaction. In mental accounting theory, framing means that the way a person subjectively frames a transaction in their mind will determine the utility they receive or expect. This

concept is similarly used in prospect theory, and many mental accounting theorists adopt that theory as the value function in their analysis. It is important to note that the value function is ...

Mental accounting - Wikipedia

Chapter 17 is an introduction to managerial accounting. Managerial accounting relates to reporting internal to an organization, and is far less structured than the rules-based system applicable to financial (external) reporting.

Debt ratio is a solvency ratio that measures a firm's total liabilities as a percentage of its total assets. In a sense, the debt ratio shows a company's ability to pay off its liabilities with its assets. In other words, this shows how many assets the company must sell in order to pay off all of its liabilities.
