A computer is a device that can be instructed to carry out sequences of arithmetic or logical operations automatically via computer programming. Modern computers have the ability to follow generalized sets of operations, called programs. These programs enable computers to perform an extremely wide range of tasks.

Computer - Wikipedia

Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its rigid structure which is so different from writing in the humanities. One reason for using this format is that it is a means of efficiently communicating scientific findings to the broad community of scientists in a uniform manner.

How to Write Guide: Sections of the Paper - Bates College

If you have access to the physical internals of the computer, i.e. if you can open the case, and if you are willing to go through the trouble, you might find some date labels on some components (like the hard drive). I've used this method several times successfully, but it depends on where the computer was bought (small company, big vendor like Dell, internet, ...) and if they have a habit of ...

Determining Age of Windows Computer - Super User

Thanks for contributing an answer to Stack Overflow! Please be sure to answer the question. Provide details and share your research! But avoid Asking for help, clarification, or responding to other answers.

datetime format in asp.net gridview - Stack Overflow

Opened in 1999 as an elementary school, Hancock evolved into a high school providing innovative programs focusing on college preparation, community service and leadership.

Hancock High School

You have two problems with your gcc command-line. First, you're specifying the -S flag, which causes gcc to emit assembly code, rather than object code. Second, you're missing the -c flag, which tells gcc to compile the file to an object file, but not link it. If you just remove -S and change nothing else, you'll end up with an executable program named file1.o and another named file2.o, rather ...
