September QST [1957] (page 31) mentioned that a high-power 108 M c transmitter was being planned for bouncing signals off the moon, with the object of providing a satellite signal for calibrating Minitrack antennas. Procurement problems caused some delay in getting into operation, but the big (50 k W) transmitter got its first work out on the evening of December 3.

Astronomical map - Star names and designations: Of approximately 5,000 stars visible to the unaided eye, only a few hundred have proper names, and fewer than 60 are commonly used by navigators or astronomers. A few names come almost directly from the Greek, such as Procyon, Canopus, and Antares—the latter derived from “anti-Ares” or “rival of Mars” because of its conspicuous red colour.

Physical science, the systematic study of the inorganic world, as distinct from the study of the organic world, which is the province of biological science. Physical science is ordinarily thought of as consisting of four broad areas: astronomy, physics, chemistry, and the Earth sciences. Each of these is in turn divided into fields and subfields.
