Gabriella Figueroa, 16, a junior, had been in geometry class working on angle bisectors when the alarm sounded. — Anchorage Daily News, "As shots rang out, a student texts: 'If I don't make It, I love you'," 15 Feb. 2018 In geometry class, Gabriella Figueroa, 16, a junior, had been working on angle bisectors when the alarm sounded.

Bisector | Definition of Bisector by Merriam-Webster

Bisect "Bisect" means to divide into two equal parts. You can bisect lines, angles, and more. The dividing line is called the "bisector" Bisecting a Line Segment. Here the blue line segment is bisected by the red line:

Angle Bisector. The (interior) bisector of an angle, also called the internal angle bisector (Kimberling 1998, pp. 11-12), is the line or line segment that divides the angle into two equal parts.. The angle bisectors meet at the incenter, which has trilinear coordinates 1:1:1.. The length of the bisector of angle in the above triangle is given by

Angle Bisector -- from Wolfram MathWorld

In geometry, the angle bisector theorem is concerned with the relative lengths of the two segments that a triangle's side is divided into by a line that bisects the opposite angle. It equates their relative lengths to the relative lengths of the other two sides of the triangle.

Angle bisector theorem - Wikipedia

A perpendicular bisector CD of a line segment AB is a line segment perpendicular to AB and passing through the midpoint M of AB (left figure). The perpendicular bisector of a line segment can be constructed using a compass by drawing circles centered at A and B with radius AB and connecting their two intersections. This line segment crosses AB at the midpoint M of AB (middle figure).

IXL - Perpendicular Bisector Theorem (Geometry practice)

In general, 'to bisect' something means to cut it into two equal parts. The 'bisector' is the thing doing the cutting. With a perpendicular bisector, the bisector always crosses the line segment at right angles (90°).

The angle bisector theorem is concerned with the relative lengths of the two segments that a triangle's side is divided into by a line that bisects the opposite angle. It equates their relative lengths to the relative lengths of the other two sides of the triangle. To bisect an angle means to cut it into two equal parts or angles. Say that we wanted to bisect a 50-degree angle, then we would ...

IXL - Construct an angle bisector (Geometry practice)

In general 'to bisect' something means to cut it into two equal parts. The 'bisector' is the thing doing the cutting. In an angle bisector, it is a line passing through the vertex of the angle that cuts it into two equal smaller angles. In the figure above, JK is the bisector.

Angle bisector definition - Math Open Reference

A perpendicular bisector is a line that cuts a line segment connected by two points exactly in half by a 90 degree angle. To find the perpendicular bisector of two points, all you need to do is find their midpoint and negative reciprocal, and plug these answers into the equation for a line in slope-intercept form.
